

Daniel Göransson

Accessibility Engineer

Daniel is an Accessibility Engineer and frontend developer with over 10 years of experience creating inclusive digital products. He excels in modern web development while prioritizing user experiences for all abilities.

With expertise in accessibility and engineering, Daniel has helped teams implement WCAG standards, built accessible component libraries, led audits, and enhanced web/mobile applications. Collaborative by nature, he works with engineers, designers, researchers, and product teams to optimize workflows and broaden accessibility in organizations.

Skilled in assistive technologies like VoiceOver, NVDA, JAWS, and TalkBack, he empathizes with the challenges faced by users with disabilities. Daniel mentors teams through coaching and knowledge sharing to foster inclusive, sustainable, impactful digital products.

Selected projects

Accessibilty Specialist

Epidemic Sound | 2025 - 2026

At Epidemic Sound, I audited accessibility in websites, apps, and audio/music features, proposing solutions for complex challenges. I reviewed video-editing plug-ins, led screen reader workshops, and guided developers and UX teams in enhancing accessibility with code-level support.

Accessibility Engineer

Länsförsäkringar | 2023 - Ongoing

At Länsförsäkringar, as an Accessibility Engineer, I support 20+ product teams in ensuring usability, quality, and security. I develop accessibility improvements, audit designs, train teams in assistive tech, deliver workshops, and advise leadership on embedding inclusive practices in product development.

Accessibilty Engineer

Länsförsäkringar

In my role as an Accessibility Engineer at Länsförsäkringar, I work in a large and complex banking and insurance environment with high demands on quality, security and usability. I support more than 20 product teams across the group and contribute to the development of accessibility improvement such as components in the design system and I regularly audit both UI components and product views to ensure compliance with accessibility standards and best practices.

A key part of the assignment is upskilling teams in accessibility and assistive technologies, such as screen readers on both desktop and mobile, magnification and more. I have delivered numerous workshops and trainings for a wide range of roles - including developers, designers, content and copywriters, user researchers and customer service - helping teams integrate accessibility into everyday product development.

I also participate in leadership and strategy meetings, providing input on long-term ways of embedding accessibility into the full product lifecycle and scaling inclusive practices across the organization.

Accessibilty Specialist

Epidemic Sound

At Epidemic Sound, I delivered accessibility repots and performed live audits on the public website, web app and iOS/Android applications. The goal was to identify accessibility issues and propose solutions to complex accessibility challenges in audio and music players, sound editing features and search functions.

I also reviewed accessibility in video-editing plug-ins for Adobe Premiere and DaVinci Resolve. I held workshops on screen readers and supported developers and UX teams with code-level guidance to improve accessibility across the product.

Lead developer

aXs Lab

For evaluating how accessible the voting locations in Sweden were, we create a web app for collecting and visualizing the results of physical accessibility evaluations done by the community. The code was written using Yii, PHP and HTML/CSS/JS and was written with accessibility in mind for obvious reasons.
