

Joel Holmberg

Senior Java Backend Developer & Software Architect

Joel is a senior Java backend developer and software architect with a master's degree in computer science from KTH and more than 14 years of software development experience. He has deep experience with Java, Spring Boot, SQL, PostgreSQL, API design, microservices and integration-heavy distributed systems.

He has delivered business-critical backend services in banking and payments, e-health, education, culture and startup environments. His work includes bank and merchant integrations, REST APIs, asynchronous communication, data modeling, CI/CD, logging, quality practices and systems with high requirements for security, traceability, uptime, performance and test coverage.

Joel is an analytical problem solver with strong pedagogical skills. He quickly understands complex flows, internal organizations and technical stacks, and contributes with architecture, implementation, troubleshooting, code review, documentation and knowledge sharing in cross-functional teams.

SELECTED PROJECTS

Backend Developer - Bankgirot

Jan 2012 - Dec 2016 - Stockholm

Backend developer in the team that built Swish, Sweden's largest mobile payment solution. Joel led the introduction of B2B payments in a microservice architecture and worked with integrations for banks, merchants and Swish support, with high requirements for security, traceability, test coverage, uptime and performance.

Backend Developer and Architect - We-U-Me AB

Oct 2021 - present

Contributed from idea and pre-study through MVP and continued development for a personal-assistance startup. The work included solution proposals, software architecture, database structure, backend code, PaaS, CI/CD, logging and quality governance.

Fullstack Developer - Riksförbundet FUB

Jan 2025 - Jan 2026

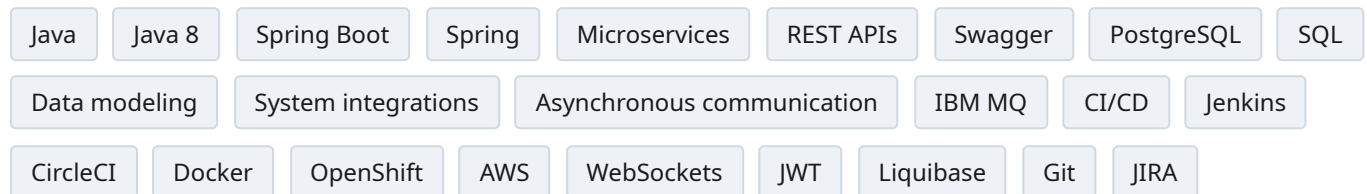

Built DigiVi with a Java, Spring Boot and PostgreSQL backend supporting React interfaces for several user roles. Joel created the data model, backend and APIs, including interactive Swagger documentation.

Jira Sysadmin and Plugin Developer - Jeppesen, SJ and others

Sep 2012 - Dec 2013

Responsible for setup, server maintenance, application lifecycle and plugin development for complex JIRA ticketing systems used by fintech SaaS companies and public-sector authorities. Plugins were developed with Java and integrated with JIRA SDK/APIs.

TECHNIQUES

PROJECTS AND ASSIGNMENTS

Backend Developer - Bankgirot

Jan 2012 - Dec 2016 - Stockholm

Joel worked as a backend developer in the team behind Swish. He led the work to introduce B2B payments in a microservice architecture and integrated the solution with banks, merchants and Swish support. The assignment included on-call responsibility and production troubleshooting in an environment with high requirements for security, traceability and test coverage.

Backend Developer and Architect - We-U-Me AB

Oct 2021 - present

Joel has been part of the work from idea and pre-study through MVP and continued development for a startup in personal assistance. He has contributed solution proposals, software architecture, database structure, backend code, frontend code, PaaS, CI/CD, logging and quality governance, and has supported junior colleagues and Scrum Master responsibilities when needed.

Fullstack Developer - Riksforbundet FUB

Jan 2025 - Jan 2026

For DigiVi, Joel created the data model, backend and APIs for a web application that helps users with disabilities find friends and partners and learn about relationships. The backend in Java, PostgreSQL and Spring Boot supports React interfaces for several user roles, with interactive API documentation in Swagger.

Architect and Fullstack Developer - Teknik i Vast

Jun 2019 - Jan 2025

Joel created the architecture for Techformance, an interactive theater application where participants influence what happens on stage. The application used React for multiple interfaces and Java/Spring Boot for the backend, with WebSockets and PostgreSQL for interactive flows.

Java

Spring Boot

Architecture

Fullstack Developer - Dit-i-tid

Jan 2020 - Dec 2024

Joel wrote most of the code for Dit-i-tid, a reminder service focused on cognitive disabilities. The service was built with Java, Spring Boot and Angular/TypeScript/JavaScript and hosted on AWS, with REST APIs, JWT, Liquibase, user testing and design work.

JWT

Liquibase

AWS

Angular

AI-assisted Development Lead - ViewMe

Jan 2026 - Apr 2026

Joel led an initiative to introduce AI-supported development with Cursor and related tools. The work covered boilerplate generation for DTOs, mappers and controllers, refactoring, JUnit test generation, debugging, legacy-code documentation, SQL generation, database optimization, API contracts and best-practice analysis.

Database optimization

Jira Sysadmin and Plugin Developer - Jeppesen, SJ and others

Sep 2012 - Dec 2013

Joel was responsible for system setup, server maintenance, application lifecycle and plugin development for complex JIRA ticketing systems used by fintech SaaS companies and public-sector authorities. Plugins were developed with Java and integrated with JIRA SDK/APIs and Thymeleaf/JavaScript user interfaces.

SKILLS

Expert: Java, Java 8, backend development, microservice architecture, prototyping and WCAG-aware development.

Advanced: Spring Boot, Spring, SQL, PostgreSQL, data modeling, REST API, Swagger, WebSockets, Hibernate, Liquibase, Git, system integrations, asynchronous communication, CI/CD, accessibility testing and accessible code.

High competence: Docker, Docker Compose, Jenkins, CircleCI, OpenShift, AWS, Heroku, CleverCloud, IBM MQ, JWT, MapStruct, JHipster, Scrum Master support, React.js, TypeScript, Angular, Material UI and JIRA plugin development.

Additional competence: Cursor AI, AI-supported development, AI development tools, Atlassian RoVo AI, legacy-code documentation, SQL generation, database optimization, C#, Xamarin Android/iOS, Android SDK and .NET.

COURSES, CERTIFICATIONS AND EDUCATION

Oracle Java SE 8 Programmer certification, 2012. Master in Computer Science and Teaching, Royal Institute of Technology (KTH), Stockholm, 2007-2012.
