

Joel Holmberg

Senior Java Backend Developer & Software Architect

Joel is a senior Java backend developer and software architect with a master's degree in computer science from KTH and more than 14 years of experience in software development. He has deep experience with Java, Spring Boot, SQL, PostgreSQL, API design, microservices and integration-heavy distributed systems.

He has delivered business-critical backend services in banking and payments, e-health, education, culture and startup environments. His work includes microservice architecture, bank and merchant integrations, data modeling, REST APIs, CI/CD, logging, operational support and systems with high requirements for security, traceability, uptime, performance and test coverage.

Joel combines hands-on backend delivery with architecture, code review, debugging, Git-based development workflows and AI-assisted engineering practices. He quickly understands complex technical stacks and internal organizations, and contributes with clear problem solving, quality practices and knowledge sharing across teams.

SELECTED PROJECTS

Backend Developer - Bankgirot

Jan 2012 - Dec 2016 - Stockholm

Backend developer in the team that built Swish, Sweden's largest mobile payment solution. Led the introduction of B2B payments in a microservice architecture and worked with integrations for banks, merchants and internal support systems, including on-call support and urgent production troubleshooting in an environment with high requirements for security, traceability, test coverage, uptime and performance.

AI-assisted Development Lead - ViewMe

Jan 2026 - Apr 2026

Led an initiative to introduce AI-assisted development with Cursor and related tools. The work covered boilerplate generation for DTOs, mappers and controllers, refactoring, JUnit test generation, debugging, legacy-code documentation, SQL generation, database optimization, API contracts and best-practice analysis.

Backend Developer and Architect - We-U-Me AB

Oct 2021 - present

Contributed from idea and pre-study through MVP and continued development for a personal-assistance startup. Worked with solution proposals, software architecture, database structure, backend and frontend code, PaaS, CI/CD, logging, quality governance and technical support for junior colleagues.

Jira Sysadmin and Plugin Developer - Jeppesen, SJ, etc.

Sep 2012 - Dec 2013

Managed system setup, server maintenance, application lifecycle and custom plugin development for complex Jira issue-management systems used by fintech SaaS companies and public agencies. Plugins were developed in Java and integrated with Jira SDK/API capabilities and web user interfaces.

PROJECTS AND ASSIGNMENTS

Backend Developer - Bankgirot

Jan 2012 - Dec 2016 - Stockholm

Joel worked as a backend developer in the team behind Swish. He led the work to introduce B2B payments in a microservice architecture and integrated the solution with banks, merchants and internal support functions. The assignment included on-call responsibility and production troubleshooting in an environment with high requirements for security, traceability, test coverage, uptime and performance.

Jenkins

Docker

IBM MQ

AI-assisted Development Lead - ViewMe

Jan 2026 - Apr 2026

Joel led an initiative to introduce AI-assisted development with Cursor and related tools. The work included boilerplate generation for DTOs, mappers and controllers, refactoring, JUnit test generation, debugging, legacy-code documentation, SQL generation, database optimization, API contracts and best-practice analysis. The solution was built with modern backend principles, CI/CD and integrations between multiple systems and services.

Cursor AI

AI development tools

Atlassian Rovo AI

JUnit

SQL

API contracts

Database optimization

Backend Developer and Architect - We-U-Me AB

Oct 2021 - present

Joel has been part of the work from idea and pre-study through MVP and continued development for a startup in personal assistance. He has contributed solution proposals, software architecture, database structure, backend code, frontend code and UX design, and has supported junior colleagues and Scrum Master responsibilities when needed.

Java

Hibernate

PostgreSQL

Data modeling

React.js

CleverCloud

CI/CD

Jira Sysadmin and Plugin Developer - Jeppesen, SJ, etc.

Sep 2012 - Dec 2013

Joel was responsible for system setup, server maintenance, application lifecycle and custom plugin development for complex Jira issue-management systems. The systems supported both fintech SaaS companies and public agencies, and the plugins were developed in Java with integrations to Jira SDK/API functionality and web user interfaces.

Java

Jira

MySQL

Thymeleaf

JavaScript

Server maintenance

Fullstack Developer - Riksforbundet FUB

Jan 2025 - Jan 2026

For DigiVi, Joel created the data model, backend and APIs for a web application that helps users with disabilities find friends and partners and learn about relationships. The backend in Java, PostgreSQL and Spring Boot supports React interfaces for several user roles, with interactive API documentation in Swagger.

Java

Spring Boot

PostgreSQL

Swagger

REST APIs

React.js

Architect and Fullstack Developer - Teknik i Vast

Jun 2019 - Jan 2025

Joel created the architecture for Techformance, an interactive theater application where participants influence what happens on stage. The application used React for multiple interfaces and Java/Spring Boot for the backend, with WebSockets and PostgreSQL for interactive flows.

Java

Spring Boot

WebSockets

PostgreSQL

React.js

Architecture

Fullstack Developer - Dit-i-tid

Jan 2020 - Dec 2024

Joel wrote most of the code for Dit-i-tid, a reminder service focused on cognitive disabilities. The service was built with Java, Spring Boot and Angular/TypeScript/JavaScript and hosted on AWS, with REST APIs, JWT, Liquibase and accessibility considerations.

Java

Spring Boot

REST APIs

JWT

Liquibase

AWS

Angular

Fullstack Developer - SBAB

Apr 2019 - Dec 2023

Together with SBAB and Make Equal, Joel built Respekttrappan, a Trello-like web application for workplace exercises in equal treatment and anti-discrimination. He worked with backend and frontend development and helped secure a high level of accessibility in the web application.

Java

Spring

React.js

Material UI

User testing

Angular Developer - CSN

May 2022 - Jun 2023

Joel developed Angular components, improved the quality of existing components and worked in a design-system team using agile processes. He documented component best practices and accessibility aspects in Storybook and contributed to accessibility training and strategy for document and software teams.

- Angular
- Design System
- Storybook
- Component Library Development
- Best Practices
- Accessibility

SKILLS

Expert: Java, Java 8, backend development, software architecture, prototyping and WCAG-aware development.

Advanced: Spring Boot, Spring, SQL, PostgreSQL, data modeling, REST APIs, Swagger, WebSockets, Hibernate, Liquibase, Git, integrations, CI/CD, accessibility testing and accessible code.

High competence: Docker, Docker Compose, Jenkins, OpenShift, AWS, Heroku, CleverCloud, IBM MQ, JWT, MapStruct, JHipster, Scrum Master support, React.js, TypeScript, Angular, Material UI, Jira administration and plugin development.

Additional competence: Cursor AI, AI-supported development, AI development tools, Atlassian Rovo AI, JUnit test generation, best-practice analysis, C#, Xamarin Android/iOS, Android SDK, .NET and user testing.

COURSES, CERTIFICATIONS AND EDUCATION

Oracle Java SE 8 Programmer certification, 2012. Master in Computer Science and Teaching, Royal Institute of Technology (KTH), Stockholm, 2007-2012.
