Joel Holmberg

Senior Fullstack Developer & Software Architect

Joel is a senior fullstack developer and software architect with more than 14 years of experience developing and maintaining production systems. He combines deep Java, Spring Boot, PostgreSQL and API design experience with hands-on React and TypeScript frontend delivery, and has worked in finance, e-health, education, culture, accessibility and startup environments.

He has built business-critical payment flows, integration-heavy distributed systems, accessible web applications and long-lived product platforms. Joel is an analytical problem solver who quickly understands complex technical flows and organizations, contributes with architecture and implementation, and supports teams through code review, debugging, quality practices and knowledge sharing.

Joel also brings practical experience from AI-assisted development initiatives, including Cursor and LLM-based workflows for refactoring, JUnit test generation, legacy-code documentation, SQL generation, database optimization, API contracts and best-practice analysis.

SELECTED PROJECTS

Fullstack Developer - Riksförbundet FUB

Jan 2025 - Jan 2026

Built DigiVi, a web application where a Java, Spring Boot and PostgreSQL backend supports React interfaces for end users, administrators and super administrators. Joel created the data model, backend and APIs with interactive Swagger documentation, and implemented and improved React components and views.

Architect and Fullstack Developer - Teknik i Väst

Jun 2019 - Jan 2025

Created the architecture for Techformance, an interactive theater application with multiple React interfaces, Java and Spring Boot backend services, WebSockets and PostgreSQL. The assignment combined long-term architecture, backend implementation and frontend component work.

Software Architect and Fullstack Developer - We-U-Me AB

Oct 2021 - present

Contributed from idea and feasibility study through MVP and continued development for a personal-assistance startup. Worked with solution proposals, software architecture, database structure, backend and frontend code, PaaS, CI/CD, logging and quality governance.

Backend Developer - Bankgirot

Jan 2012 - Dec 2016 - Stockholm

Backend developer in the Swish team, working with business-critical payment flows and integrations with banks, merchants and internal support systems. Led the introduction of B2B payments in a microservice architecture with high requirements for security, traceability, accessibility, uptime and performance.

PROJECTS AND ASSIGNMENTS

Fullstack Developer - Riksförbundet FUB

Jan 2025 - Jan 2026

For DigiVi, Joel created the data model, backend and APIs for a web application that helps users with disabilities find friends and partners and learn about relationships. The backend in Java, Spring Boot and PostgreSQL supports React interfaces for several user roles, with interactive API documentation in Swagger.

Java

Spring Boot

PostgreSQL

REST APIs

Swagger

React.js

Architect and Fullstack Developer - Teknik i Väst

Jun 2019 - Jan 2025

Joel created the architecture for Techformance, an interactive theater application where participants influence what happens on stage. The application used React for multiple interfaces and Java/Spring Boot for the backend, with WebSockets and PostgreSQL for interactive flows and long-term maintainability.

Architecture

Software Architect and Fullstack Developer - We-U-Me AB

Oct 2021 - present

Joel has been involved from idea and feasibility study through MVP and continued development for a startup in personal assistance. He has contributed solution proposals, software architecture, database structure, backend code, frontend code and UX design, and supported junior colleagues and Scrum Master responsibilities when needed.

Material UI

CI/CD

Backend Developer - Bankgirot

Jan 2012 - Dec 2016 - Stockholm

Joel worked as a backend developer in the team behind Swish. He led the introduction of B2B payments in a microservice architecture and worked with integrations for banks, merchants and Swish support. The assignment included production troubleshooting and an environment with high requirements for security, traceability, test coverage, uptime and performance.

Java

Spring

Microservices

Jenkins

Docker

IBM MQ

Fullstack Developer - Dit-i-tid

Jan 2020 - Dec 2024

Joel wrote most of the code for Dit-i-tid, a reminder service focused on cognitive disabilities. The service was built with Java, Spring Boot and Angular/TypeScript/JavaScript and hosted on AWS, with REST APIs, JWT, Liquibase, user testing and accessibility considerations.

Java

Spring Boot

JWT

Liquibase

AWS

Angular

Fullstack Developer - SBAB

Apr 2019 - Dec 2023

Together with SBAB and Make Equal, Joel built Respekttrappan, a Trello-like web application for equal treatment and anti-discrimination exercises in workplaces. He worked with backend and frontend development and helped secure a high level of accessibility in the web application.

Java

Spring

React.js

Material UI

User testing

Accessibility

Angular Developer - CSN

May 2022 - Jun 2023

Developed Angular components and worked with design systems, Storybook and best practices in a cross-functional team. The work included component-library development and WCAG 2.2 AA considerations for public-sector digital services.

WCAG 2.2 AA

AI-assisted Development Lead - ViewMe

Jan 2026 - Apr 2026

Led an initiative to introduce AI-supported development with Cursor and related tools. The work covered boilerplate generation for DTOs, mappers and controllers, refactoring, JUnit test generation, debugging, legacy-code documentation, SQL generation, database optimization, API contracts and best-practice analysis.

Database optimization

Legacy Code Upgrade and Modernization

Apr 2026 - Jul 2026

Upgraded frameworks and dependencies to modern versions of Java, Spring Boot 3, Maven, PostgreSQL, Hibernate and Angular, and upgraded servers and CI/CD infrastructure to resolve performance issues and prepare for continued development. Joel was responsible for code quality, testing and releases as well as backend and infrastructure upgrades.

SKILLS

Expert: Java, Java 8, backend development, fullstack development, API design, microservice architecture, prototyping, code review and debugging.

Advanced: Spring Boot, Spring, SQL, PostgreSQL, data modeling, REST APIs, Swagger, WebSockets, Hibernate, Liquibase, Git, integrations, React.js, TypeScript, accessibility testing and accessible code.

High competence: Docker, Docker Compose, Jenkins, CircleCI, OpenShift, AWS, Heroku, CleverCloud, IBM MQ, JWT, MapStruct, JHipster, Scrum Master support, Angular, Storybook and Material UI.

Additional competence: Cursor AI, AI-supported development, AI development tools, Atlassian Rovo AI, LLM integration, C#, Xamarin Android/iOS, Android SDK, .NET and JIRA plugin development.

COURSES, CERTIFICATIONS AND EDUCATION

Oracle Java SE 8 Programmer certification, 2012. Master in Computer Science and Teaching, Royal Institute of Technology (KTH), Stockholm, 2007-2012.

LANGUAGES

Swedish — Native · English — Fluent / full professional proficiency
